

AI Doc Center Feature Support Document

Required

Your site must be licensed for advanced tier or higher for the prerequisite AI skill features. Additionally you will have to contact support to enable the “Advanced IDP Tools AI Skill”

Set Up Deployment API

In order to automatically create and version AI Skills and Process models, a deployment against the same environment will be performed containing the new process model and AI Skill objects.

1. Open **Infrastructure** section of admin console
 - Click **Enable external deployments**
 - **Deploy As:** Create a new deployment service account (if it doesn't already exist)
 - **Authenticate As:** Use the same service account
2. Open **Web API Authentication** section of admin console
 - Click **Create**
 - **Description:** Deployment
 - **Service Account:** use same service account
 - Copy API key
3. Update the connected system **SHRD Self Deployment** with the API key.

[Guided Steps](#) for deployment API Setup

Application

The application should be deployed through the typical compare and deploy procedure including the installation sql scripts, application, and plugins

Plugins

The following plugins are required:

Appian Regular Expression Functions - 2.2.36

Appian Solutions Plugin -1.38.0

Content Tools - 1.11.1

Date and Time Utilities - 1.3.0
