Zoom Connected System

Zoom Connected System is used to create, get, list, update, delete meetings, get and delete recordings, generate signatures for the Zoom component, and store the screenshots in Appian folders taken in the component.

Connected System Parameters:

1. **Client ID** - The client ID from the Oauth app was created for Zoom integrations.
2. **Client Secret** - The Client Secret from the Oauth app was created for Zoom integrations.
3. **API Key** - Client ID from the Meeting SDK app created for Join Zoom meeting component.
4. **API Secret** - Client Secret from the Meeting SDK app created for Join Zoom meeting component.
5. **Host Email** - The email from which the Oauth app is created.
6. **Upload Folder UUID** - The folder ID of the screenshot taken from the Join Zoom meeting component should be stored in the Appian KC.
7. **Upload Images as User** - The images stored in the Appian KC will be under this username.

Note: If the user has to use only the component, The values for Client id and Client secret and Host email can be configured with random value and need not click on the authorize button in the connected system. You can just configure the API key, API secret, Upload Folder UUID and Upload Images as User.
Connected System Properties

Connected system that accesses the zoom platform to manage the zoom meetings and generate token and save the screenshot from the Join Zoom Meeting Component.
