

Logs Servlet

This servlet plugin is used to display log files from a self-managed Appian platform. It is compiled for Appian 22.3+.

To deploy, copy the generated Logs-Servlet-1.0.0.jar file to the self-managed `/_admin/plugins` directory.

To access the logs enter your url followed by `suite/plugins/servlet/logs`

To access the logs, browse to `/suite/plugins/servlet/logs`. To access the logs, the user making the request must be a member of the Designers group.

To change the access controls, modify the function `isAuthorizedUser()` in `com.appiancs.plugins.servlet.logs.LogsServlet`.
