CHALLENGES IN MANAGING LITIGATION MATTERS

It is inevitable that most organizations will need to defend against or file a lawsuit at one point or another. Problems in effectively managing litigation matters are compounded in the absence of a digital solution. Here are some of the common challenges –

1. Inefficient Handling of Litigation Cases.

Manual processes make it challenging to recognize inefficiencies and streamline case tasks that can result in delays or missed deadlines adding to an organization's legal and financial consequences.

2. Ineffective Document Management.

Disparate case document stores such as filing cabinets, personal storage, and emails result in protracted timelines and elevate the risk of delays emanating from an inability to locate pertinent documents in a timely manner.

According to 2021 Clio Legal Trends Report, 40% of lawyers report that they are unable to track the progress of their cases effectively.

3. Absence of a unified case view.

Disparate stores of case knowledge hinder timely and strategic decision-making.

According to 2021 Clio Legal Trend report, lawyers spend an average of 20% of their time searching for documents and information.

4. Sub-optimal coordination and communication.

Matter correspondence stays in individual email inboxes often excluding key case contacts. This results in poor communication with important correspondence not always reaching all relevant stakeholders.

5. Risk of Security Breaches.

Insufficient security measures elevate the vulnerability of sensitive legal data, raising the prospect of unauthorized access or data breaches.

6. Poor analytics prevent continuous improvement.

Without an integrated digital reporting infrastructure systematically capturing case details, analyzing case data becomes arduous, impacting strategic decision-making and hindering continuous improvement.

OUR DIGITAL LITIGATION MANAGEMENT SOLUTION TO THE RESCUE

Our digital solution for Litigation Management leverages technologies such as case management, workflow, business rules, artificial intelligence, document management and analytics to provide organizations the strategic edge they need to efficiently and effectively manage litigation matters.

Here are the salient features of our digital solution -

01 Automated and Configurable Workflows

Ensure a systematic and streamlined approach to securely filing case details, managing involved parties, recording claims, and tracking court hearings over the entire matter lifecycle.

02 Secure Document Handling

Seamlessly search, tag, and upload new case documents or new document versions with advanced capabilities for enhanced traceability and accessibility.

03 Comprehensive Case Contacts Management

Manage witnesses, plaintiffs, defendants, and related parties, adapting to the evolving dynamics of legal cases.

04 Detailed Cost Estimations

Estimate case expenses based on lawyer and court tariffs enabling meticulous and detailed financial planning for litigation matters.

05 Integrated Timesheets

Record billable hours for litigation matters and case actions, ensuring financial transparency on incurred costs by lawyer and facilitating accurate invoicing.

06 Centralized Calendar for Critical Events

Schedule and coordinate case hearings, ensuring all stakeholders are well-informed about critical events in legal proceedings.

07 Automatic Data Extraction

Leverage pre trained machine learning models based optical character recognition (OCR) for accelerated document extraction.

08 Real time Analytics

Gain real-time visibility into KPI metrics such as active cases, upcoming hearings and incurred lawyer costs.

09 Self-Service Analytics

Enable authorized end-users to create custom reports for additional insights on litigation matters.

These features collectively offer a robust and user-friendly digital solution ensuring comprehensive legal matter management, financial transparency, efficient coordination, and insights for continuous improvement

BENEFITS OF OUR DIGITAL LITIGATION MANAGEMENT SOLUTION

Here is a list of benefits that an organization can realize with our digital solution -

1. Improved Operational Efficiency.

- Improves efficiency by streamlining case tasks automatically routing them to the relevant case stakeholders and sending reminders based on SLAs.
- Automates menial tasks such as document extraction thereby allowing focus on more value-added tasks improving overall efficiency.

2. Strategic and Timely Decision Making Facilitated by Unified Case Views.

- Centralizes case details, documents, notes as unified and organized case record views enabling actionable insights and timely strategic decision making on any given matter.
- Ensures that all authorized users are well-informed about critical events through centralized calendar views of all hearing dates enabling better coordination.

3. Efficient Document Management.

- Ensures secure digitized storage, version control and easy retrieval of legal documents.
- Enables end-users to have natural flowing conversations with Artificial Intelligence chatbots that source answers from case documents.

4. Systematic Financial Planning.

- Enables meticulous and detailed financial planning for litigation matters through cost estimations based on lawyer and court tariffs.
- Ensures financial transparency on incurred case costs through billable hours recorded for case matters.

5. Real-Time Analytics Driving Continuous Improvement.

- Provides valuable insights into case data through analytics enabling continuous improvement.
- Enables informed decision-making, strategic planning and effective risk management.
