

→ Taking the complexity out of grant management

Data scattered across systems, spreadsheets, and emails is complex, frustrating, and overly manual. As a result, state and local governments risk:

- Underutilized funding within prescribed deadlines.
- Duplication and not having the most up to date required documentation.
- Increased record retention requirements, as those requirements apply to each of the multiple documents.
- Increased chances of reputational harm and media attention for mismanaged funds and grants.
- Enhanced scrutiny by federal funders.

Built on the Appian low-code enterprise automation platform, grantTRAX provides a configurable grants management solution that streamlines the financial disbursement process and efficiently tracks beneficiary/subrecipient applications from intake to closeout so you can focus on supporting HUD CDBG-DR Applicants/Subrecipients.

Most state and local agencies can't view grants management data across funding sources or offices. Existing systems are siloed, fragmented, and don't talk to each other. Plus, they are hard to adapt for agency specific needs and new federal requirements.

grantTRAX offers	grantTRAX delivers
Intuitive interface built around the functional needs of each user role	Dashboards and reporting that enable data-driven decisions across federal funding sources and programs
Transparency and situational awareness of where money is going	Visibility of program, project, and activity progress to all relevant stakeholders (e.g., participating grantees, the people being served)
Ability to assign and reassign tasks	Real-time updates as program design, policies, and procedures inevitably evolve
Agility and speed to deploy and adapt custom solutions	Increased trust in the government and the grants process
Ability for usage by Grantee and subrecipients	Streamline process that reduces workload on state and local agencies, given ability to upload and access documentation
