AppInsights

Persistent Systems' AppInsights is like Google Analytics for Appian – it provides valuable insights into tasks, actions, users and performance of SAIL forms grouped by application.

Leveraging Appian process reports and log files, AppInsights provides Appian application owners complete visibility into application usage and performance. Users can drill down from applications to actions to processes to sub-processes to tasks, providing complete visibility into usage of the complete Appian instance, grouped by application

AppInsights provides Appian application owners complete visibility into application usage and performance

Application View

Apply the 'Application Lens' to all Appian task metrics. Which application was busy at what time?

User Insights

Visibility into historic data from log files. Who logged in when, and did what? The complete audit trail of actions in a session

Task Insights

Complete drill down from applications to actions to processes to sub-processes to tasks, at any point in time in the past. Process archival not an issue!

Performance Insights

How did each SAIL form in each application perform? Min, Max, Mean and initial load times!

Application Usage

Reporting ready-to-share charts and graphs on application usage

Plug and Play

No changes required on existing process models. Just deploy and get insights!
