

A New Solution: Asset Management

THE PROBLEM

In an increasingly complex and distributed post-pandemic work environment, maintaining accurate company asset data is a complicated task. Whether tracking IT or office equipment, or even heavy machinery and vehicles – tracking methods can fail to keep up with day-to-day demands and growth. Spreadsheets can't keep up, custom solutions rarely scale, and pen and paper stopped being effective in the 80s. Antiquated or out-grown systems can lead to unexpected (and avoidable) downtime, employees frustrated with missing or misperforming equipment, and unforeseen maintenance or replacement costs. If these struggles resonate with you, you're not alone—and there is a better way.

THE SOLUTION

With Zimpatica's Asset Management Solution you can proactively manage these assets, alleviate undue stress, and power more productive processes. The solution can be configured to meet your unique requirements across any asset type, whether you're looking to keep track of your computer hardware and peripherals, manage your office space workstations, catalog your medical equipment, or complete any other asset management activity. The solution features a robust suite of capabilities: inventory tracking, maintenance scheduling, depreciation management, audit tracking, alerts, notifications, and advanced reporting and analytics. Zimpatica's Asset Management Solution streamlines workflows, enhances visibility, ensures compliance, and boosts profitability. Easy to use, scalable, and easily integrated with other business solutions - the solution makes it easy to manage your organization's critical assets across the entire lifecycle from acquisition to disposal.
