APPIAN ACCELERATOR
FOR FAST RESULTS

Manage My Care

big

Bits In Glass
Your Business. Optimized.

Patients are demanding more transparency and control of their patient information and increasingly want to be able to access this information directly. The **Manage My Care** application by Bits In Glass provides a patient portal that leverages emerging norms around self-service that enhance user experience and enable better communication between patients and care providers. The clinician portal of the application provides care teams with real-time access to the patient's continuum of care, cohort data and more.

WHAT IS AN APPIAN ACCELERATOR?

An **Appian Accelerator** is an application that covers the core functionality for a particular business function. It provides Appian customers with a "running head start" so they can deliver applications in less time as compared to starting from scratch. Appian Accelerators lower risk, reduce implementation timelines, are compliant with Appian best practices and, most importantly, reduce time to value.

The best part is that customers can still overlay their specific business needs or "secret sauce" on top of an Appian Accelerator by working with our team of domain experts and Appian technical consultants.

**Appian** | **PARTNER**

MANAGE MY CARE ACCELERATOR

Patients and care teams have better insight into key data and events with instant reminders, event notifications, and alerts that support a proactive approach to requesting information from patients as needed, while simultaneously flagging incidents and key data points for care providers to review and respond to as needed. When combined with the patient-specific rules engine, healthcare organizations are enabled to implement individualized health care for all of their patients providing better alignment to the patient's overall treatment plan.

ACCELERATOR BENEFITS & FEATURES

Key Benefits

Divided into two major areas, the Patient Portal and Provider Portal:

◆ Address current patient demands for more transparency and control

◆ Provide real-time insights to the patient and care teams

◆ Secure communications ensure timely and relevant decisions based on current data

◆ Improves chronic disease management and manages care as a population or individual
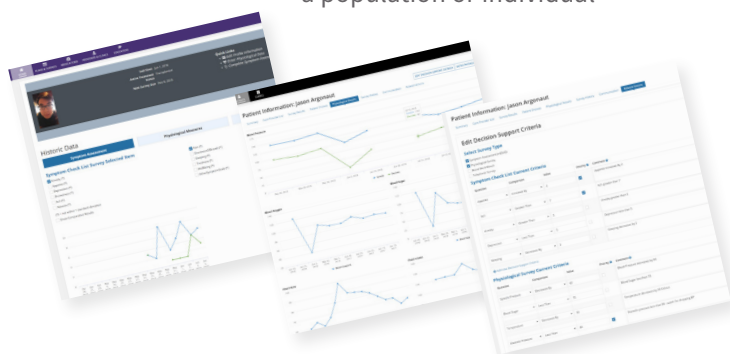

Key Features & Functionality (Patient Portal)

◆ Submit quantitative information such as blood pressure, weight, pulse, fluid intake and outtake, and any other qualitative measure

◆ Capture qualitative information such as long-term health plan and life goals and symptom assessment for indicators such as anxiety, energy, and pain

◆ Review any previously submitted information for long-term review and lifestyle planning

◆ Raise concerns for review by a care provider either immediately or during the next face to face meeting about any piece of submitted information

Provider Portal

◆ View all submitted information for a patient including a comparative visualization against population data. E.g. Comparing an individual's results against other patients

◆ A patient-specific event history designed to highlight new events of note either for a specific patient or for all patients assigned to any given facility

◆ ...and more!
