Docx to HTML

Docx to HTML

- Converts the Doc or Docx document to HTML. Please note that the translation from DOCX to HTML is not always 1:1. The template may need to be tweaked or simplified to achieve the desired results.
- Supported Language - English (United States).

Parameters:

Input,

- *Source Document* (document)
    - Provide a Doc or Docx document.
- *Create New Document* (boolean)
    - Provide true if a plugin wants to create a new document for HTML.
- *New Document Name* (text)
    - Provide the name for the HTML document.
- *New Document Desc* (text)
    - Provide the description for the HTML document.
- *Save In Folder* (folder)
    - Select the folder where the plugin needs to save the HTML document.
- *Font Documents* (document)
    - Provide the font document that used in the Doc or Docx document.
- *Existing Document* (document)
    - Provide the existing document to overwrite the new HTML document. Mandatory if *Create New Document* is set as false.

Output,

- *New Document Created* (document)
    - Provides the generated HTML document.
