

Hotel Desk Reservation: A Simple Way to Manage and Reserve Workstations

THE PROBLEM

The pandemic has forever changed the face of the modern workforce, as the hybrid workplace continues to gain in popularity. Office hoteling has emerged as one of the most effective ways to support the hybrid model. However, managing the logistics of figuring out who sits where on which days can be a challenge. You may have employees who show up for the day only to find they don't know where to sit, which affects productivity, while teams may struggle to spatially coordinate office visits with peers, impacting collaboration. When guests visit for the day, if you don't have somewhere to put them, you run the risk of looking disorganized and unwelcoming. What's more, without visibility into the overall utilization of the office space, you lack the information you need to make strategic decisions about how, or when, to make changes to the footprint.

THE SOLUTION

Zimpatica's Hotel Desk Reservation solution pre-built on the Appian platform removes those barriers to support a more cohesive, productive in-person work environment. The solution makes it easy for employees to reserve desks with the click of a mouse, while its interactive map lets users view the floor plan to see what desks are available in a given area of their office space. With a visual of what's available and where, individuals and teams can reserve desks according to their needs for the day.

The application is built to scale, which means administrators can seamlessly update existing floor plans or add new floor plans as the organization's needs change. Its robust reporting functionality delivers added visibility into utilization, which can help inform near- and long-term strategic planning of future space requirements.

Power your hybrid work model and facilitate a smooth return to the office with Appian.
