MagicDeploy
Configurable Deployment Workflow

For each deployment, the review and approvals workflow is configurable

Deployment Calendar

Complete visibility into the Appian deployment calendar – team, project, sprint and application owner details

Deployment States

The 'state' for each deployment updated in real-time – scheduled, reviewed, approved, on-time, delayed/retry, failed/completed..

Persistent Systems' MagicDeploy is an Appian application that automates the complete deployment workflow for any Appian application (including database scripts), utilizing Appian APIs to inspect and import packages into a specific Appian environment without requiring a deployment team member to login to the Appian environment to complete the deployment.

MagicDeploy provides Governance and Audit for all Appian application deployments, including – Release Notes, Dev Review Comments and Deployment logs.

MagicDeploy automates the complete deployment workflow, including approvals, sign-offs, escalations and notifications

Deployment Details

Efficient mechanism to record all deployment details – Release Notes, Dev Review Comments, Approvals

Download Inspect / Import Logs

The complete Inspect / Import Logs for any deployment can be reviewed and downloaded

MagicDeploy Live!

Real-time reporting on all deployments, and automated deployment communication to all stakeholders!
