

# Sample Application Deployment Guide

1. Update the ***username*** field under the *SP\_INT\_HTTP\_GetJobResults* with a username that is registered with the target Appian environment.
2. Update the ***password*** field under the *SP\_INT\_HTTP\_GetJobResults* with the password for the username provided in the username line.
3. Update the ***authToken*** field under the *SP\_CS\_Splunk* with the authentication token generated from the Splunk console.

Important Note: The .properties file must be edited based on the above instructions before importing the Sample Application into the target Appian environment.
