

Site visA

An End-to-End Visitor Safety and Site Security Management Solution

With the ever increasing need to drive profitability and achieving compliance, organisations with multiple sites, field workforce and visitors face a myriad of concerns, like poor governance and compliance and elevated health and safety risk.

CHALLENGE

Any organisation with field sites, field workforce and visitors very well understands that it's not only imperative for them from "duty of care" perspective to ensure the health, safety and protection of their field workforce and sites, but it is also mandatory from regulation and compliance perspective as the requirements from authorities are becoming more stringent every day. Most organisations today are reliant on complex, duplicating, disjointed manual processes to manage most aspects of site access and security, like visitor eligibility and access thus resulting into:

- Poor governance and compliance
- Elevated health and safety risk
- Increasing operations costs
- Sub-optimal operations

SOLUTION

Site visA, built on Appian platform, provides an End-to-End Visitor Safety and Site Security management solution with all the aspects of Visitor Access Management integrated together, providing organisations tighter governance and control, greater visibility and complete traceability of the visitor and sites.
