
# THE LIBOR
## Transition Impact

The transition of LIBOR as a benchmark rate in the upcoming years has far reaching implications for financial institutions (FIs) worldwide. Buy-side players would be impacted in their portfolio management decisions, performance attribution and new product development, to mention a few areas. Sell-side and hedge fund players would need to take a very focused look at the implication of outstanding financial contracts to preclude undue ‘winner’ and ‘loser’ situations in complex derivatives (and thus legal and financial risk). Lenders, issuers and underwriters would also have similar concerns on their commitments.

## The challenges in the transition

Several challenges await, once alternative rates are chosen for operationalizing

- Products complexity – given the wide variety of existing products and contracts thereof, strong internal expertise, even if present, will need effective channelizing as different units in the FI come together to derive a roadmap in order to collaborate
- Contracts Remediation - Manual remediation may simply not be achievable, where supporting documentation may run into lengthy books
- IT application changes - Impact on applications will be unmanageable with traditional approaches alone
- Risk - Both financial and operational risk will need continuous evaluation and tracking as will the whole transition program itself

## Treading the challenge - The Hexaware solution

Hexaware’s offering addresses the afore mentioned challenges effectively.

- A product centric, consultative strategy helps delineate a comprehensive roadmap
- A Unified Command Center (UCC) approach, centered on Appian platform workflow capabilities stitches together the entire planning, collaborative execution, communication (internal and external) and risk management across all the three lines of defense
- User-led ML (Machine Learning) and NLP technologies leverage contract events and semantic domain awareness to generate deep insights, enabling faster and more accurate remediation of financial contracts
- Automation based tools help perform systematic and exhaustive impact analysis for application changes

### 01 Strategic Consulting

- Gap Analysis
- Impact Analysis
- Roadmap Development
- Program Governance
- Exposure management
- Valuation framework
- Portfolio/ Product Strategy
- Risk Management
- O&T Readiness

### 02 Process Implementation

- Product Booking
- Product Valuation / Pricing
- Risk Management
- Stress Testing
- Model Metrics Validation
- Operations
- Finance & Accounting
- Taxation & Regulation
- Change Management

### 03 Contracts Management

- Contracts Inventory
- Fallback Language Analysis
- LIBOR impact identification
- Remediation & Re-papering
- Customer Communication

### 04 Application Changes

- COTS Product Processors
- In-house applications -PP
- Product Management Apps
- Risk Management
- Sales & Service Apps
- Finance & Accounting Apps
- Analytics & Reporting Apps

### 05 Application Testing

- System Integration Testing
- User Acceptance Testing
- Test Automation
