Add a File Upload Component

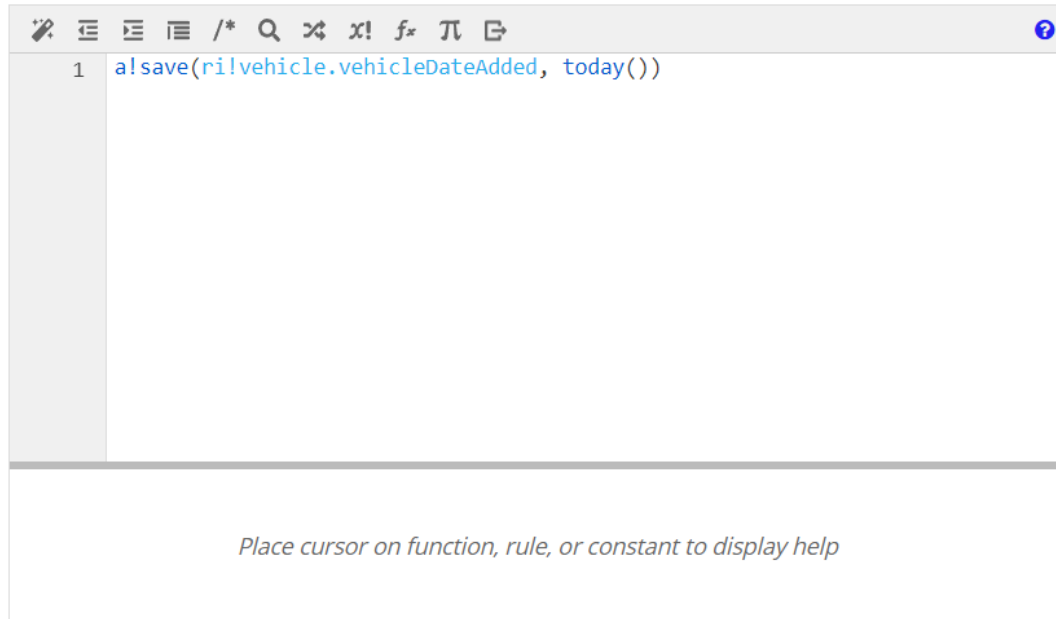

Add Dropdown Components

Configure the Submit Button

Save Value To (List of Save)

One or more variables that are updated with the button value when the user presses it. Use `!save()` to save a modified or alternative value to a variable.

The screenshot shows a code editor with a toolbar at the top containing icons for undo, redo, search, and other editing functions. The main area contains a single line of code: `!save(ri|vehicle.vehicleDateAdded, today())`. Below the code editor is a text box with the instruction: *Place cursor on function, rule, or constant to display help*.

The screenshot displays the Appian interface for editing a rule input. The top section shows the initial configuration for a rule input named 'vehicle' of type 'AX Vehicle'. Below this, two screenshots of the 'Approve Vehicle' form are shown. The first screenshot shows the form with empty input fields for Make, Model, VIN, Year, and Mileage, and buttons for CANCEL and SUBMIT. The second screenshot shows the form populated with data: Year (2019), Make (Ford), Model (F150), VIN (2F2DE48C8N4309374), and Mileage (500). A red pickup truck image is displayed next to the VIN field. The form has buttons for REJECT and APPROVE. The right sidebar shows the configuration for the selected component, including a table of rule inputs and component configuration options.

Process Model

This process model contains a process variable that it does not reference. Remove the variable if you do not intend to use it and have confirmed that it is not in use by a process report. Unused process variables can complicate comprehension and maintainability. Process variables: "approvalDecision".

Process Model

The process model has been saved. Dismissed recommendations will reappear the next time you open this model, unless you Save & Publish.
